

Waypoint — Sales Research Sample

ICP Card + 10-Lead Sheet · Researcher → Lead Generator workflow (JZ's "The Parliament")

PREPARED BY PAUL RYAN DEDUMO
PAULDEDUMO@GMAIL.COM

△ **Portfolio sample — not a real client engagement.** "Waypoint" is a fictional B2B SaaS product invented to demonstrate this workflow for Paul's portfolio. The 10 target companies are real, publicly known businesses used to show realistic ICP-matching — none of them hired Paul or Waypoint. No personal contact data was collected or scraped: this sample stops at the company level (no named individuals, emails, or phone numbers). Facts are drawn from public company-data aggregators, press coverage, and public job boards, gathered 2026-09-29 and cross-checked where sources disagreed. Treat every figure as directional, not audited.

Offer (MVO + Value Equation)

MARKET

Mid-market B2B SaaS companies (100–800 employees) running 3+ agile engineering squads across Jira/Linear + GitHub + Slack.

VEHICLE

A delivery-visibility dashboard that auto-syncs sprint, PR, and deploy data from existing tools — no new process, no manual status decks.

OUTCOME

Cuts weekly sprint-status reporting from ~2–3 hrs/EM to under 15 minutes; surfaces cross-team risk ~1–2 sprints earlier.

DREAM OUTCOME LINE

"I help engineering leaders get an honest, real-time view of delivery health — without another status meeting."

ICP Profile

PILLAR	DEFINITION
Industry	B2B SaaS / software product companies
Niche	Engineering orgs on agile/scrum, 3+ squads, using Jira or Linear + GitHub
Role / Decision-maker	Economic buyer: VP Engineering / Head of Engineering / CTO. User: Director/Engineering Manager.
Company size	100–800 employees; engineering headcount ~30–150
Location	US/EU primary

Pain Library (Top 5)

- Manual status roll-ups across Jira, GitHub, and Slack eat hours of EM time weekly.
- Cross-team dependency risk surfaces the day before release, not two weeks out.
- Leadership visibility gap — VP Eng can't answer "are we on track" without pinging 4–5 EMs.
- Process that worked at 20 engineers collapses past ~60–80.
- Tool sprawl after growth/M&A — no single source of truth.

Triggers (Top 5, all free to observe)

- Recent Series B/C/D funding — Crunchbase, TechCrunch, company press page.
- Actively hiring EM / Director / VP Engineering — LinkedIn Jobs, careers page.
- Recent acquisition or merger — press release.
- Job posts naming the pain directly ("improve engineering visibility," "reduce status-meeting overhead").
- Engineering blog post about scaling ("from 30 to 100 engineers," "squad model").

Hungry Market Test — Verdict: HUNGRY

Money: target band already pays per-seat for Jira/Linear/GitHub/Slack, post-Series-B budget sits with VP Eng. Motivated: pain is self-reported and specific across EM/VP-Eng LinkedIn posts and eng blogs, not hypothetical. Already spending: a funded, established competing category exists (LinearB, Jellyfish, Swarmia) — direct proof of real budget already moving toward this problem.

Lead Sheet — 10 Companies

COMPANY	EMPLOYEES	TARGET ROLE	WHY IT FITS	TRIGGER (DATED, SOURCED)	TEMP.
Render	~209	VP/Dir. Engineering	Mid-market infra SaaS, multiple eng pods (Platform, Postgres, Product) — exact cross-team status-roll-up pain.	3+ open EM reqs (Platform/Postgres/Product) live Sep 2026; \$100M Series C ext. Feb 2026.	Hot
Temporal Technologies	~430–611	VP/Head of Engineering	Fast-scaling dev-infra vendor serving major AI labs — process from 170 people breaks past 400+.	\$550M Series E, 2026-09-14 (~2 weeks old at research date), on top of \$300M Series D Feb 2026.	Hot
Supabase	~280+	Engineering Manager (multi-req)	Distributed-first org, 55+ countries — "no single source of truth across timezones" is structural.	Multiple live EM reqs (Billing/Platform/EngOps/Databases) Sep 2026.	Hot
Coder	~634–644	VP/Dir. Engineering	300% YoY bookings growth — hypergrowth that breaks a 20-person-era process.	\$90M Series C, 2026-04-06 (~5–6 months old — aging, not disqualifying).	Warm
incident.io	~101–250	Dir./VP Engineering	Reliability-tooling vendor for Netflix/Etsy/Linear — strong credibility angle.	\$62M Series B, 2025-04 (~17 months old, no fresher signal found).	Warm
PostHog	~200–224	Head/VP Engineering	Multi-product platform (analytics, flags, replay) — several squads by definition.	Series E Sep 2025 (~1 yr old); no 2026 round found.	Warm
LaunchDarkly	~581–664	VP/Dir. Engineering	Largest headcount in-band — feature-flag platform at this size runs many squads.	No 2026 round found (last major raise 2021) — trigger weak, fit strong.	Warm
Retool	~447	VP/Dir. Engineering	Solid band-center fit, headcount growth 340→447 since 2024.	Last funding 2022 — no fresh trigger surfaced; needs a live careers-page check.	Warm/Cold
Sourcegraph	~138–194	VP/Head of Engineering	Smallest in-band; AI-coding-tools category is hot, this company's public signals are old.	Last funding 2021 — no hiring/acquisition/blog trigger found.	Cold
Linear	~118–203	(would-be: Head of Eng.)	Screened out on read — own hiring page: "hire slowly, intend to stay small," ~25-person eng team, profitable at \$100M ARR. Opposite of the growth-pain this offer solves.	Series C 2025-06 — irrelevant; disqualifier is cultural, not financial.	Not pursued

How I validated this (QC pass)

- **Two-source headcount check** on every company (e.g. PitchBook/Tracxn + Revelio Labs); where sources disagreed the range is shown, not silently picked.
- **Trigger freshness scored against a 90-day bar** — only 3 of 10 rows came back genuinely Hot; the rest are honestly marked Warm/Cold rather than inflated.
- **Role-plausibility check** — the 3 Hot rows' open Engineering Manager requisitions were confirmed as live listings at research time, not inferred from headcount alone.
- **Disqualification check, not just qualification** — Linear is included specifically to show the screen-out step: matches the ICP on paper, gets correctly deprioritized on reading the company's own public statements.
- **No individual-contact fabrication** — no scraped or invented person, email, or phone number anywhere in this sample.

Summary

TEMPERATURE	COUNT	COMPANIES
Hot	3	Render, Temporal, Supabase
Warm	4	Coder, incident.io, PostHog, LaunchDarkly
Warm/Cold	1	Retool
Cold	1	Sourcegraph
Not pursued	1	Linear (screened out)
